N95 Face Mask ElasticTightener

Intended for use with masks that have 2 elastic bands running along the back of the head, not around the backs of the ears.

Use: Intended to remove some of the slack in the elastic band on face masks which may result from extended and repeated use. Not intended to be a substitute for a properly fitting mask.

Care & Use:
Made of 3D Printed PLA Plastic
Can be disinfected using:
- Rubbing Alcohol
- Mild Cleansers
- Soap and Water

N95 ElasticTightener Instructions

Step 1: Place ElasticTightener with hooks facing up. Position the center of the top elastic over Top Hole 1.

Step 2: Using Elastic Threader, poke elastic down through Top Hole 1.

Step 3: Pull elastic down through Top Hole 1.

Step 4: Push elastic up through the back of Top Hole 2.

Step 5: Pull elastic loop through the hole and wrap around the hook to secure.

Step 6: Repeat Steps 1-5 using Bottom Holes 1 & 2 to secure bottom elastic.

Step 7: Place over head and position as shown.

IMPORTANT:
Be sure to perform all fit and safety checks after installing ElasticTightener. If the ElasticTightener prevents a proper fit, remove it.
